

Minutes from team meeting held on 7/16/2012:

ARs:

- **Kyle:** fix current driver-side bug.
 - **John:** fix pahole output (extra 0s).
 - **Katya:** devise userspace unit tests (broken up by function).
 - **Devin:** devise driver-side unit tests (broken up by function).
 - **Jacob:** devise PCI error injection tests.
 - **Jacob:** send message to sponsors about fixing pahole output.
-
- Meeting began at 6:15 p.m.
 - John: 'argparse' module for python can help us add arguments to a python script.
 - Devin: we have met tonight's deadline.
 - Devin: we should utilize branching and merging features of git.
 - "Lblob" has become "record", which is a piece of the data structure being tracked.
 - Next iteration will focus on working on the parser.
 - Current parser code assumes we are the only ones creating blob files.
 - Is pahole.py operational at this time?
 - We need to fix possible bugs in cleanup section of driver code.
 - The team collaboratively fixed a memory allocation bug.
 - The parser has been fixed to work with new "record" format.
 - Tasks coming up:
 - Fix current driver side bug [Kyle]
 - Fix pahole output (extra 0s) [John]
 - Develop set of tests:
 - Userspace unit tests (broken up by function) [Katya]
 - Driver-side unit tests (broken up by function) [Devin]
 - PCI error injection tests [Jacob]
 - For unit tests, a wrapper driver can be created for each function.
 - AR: Jacob send message to sponsors about fixing pahole output.
